INTRODUCTION

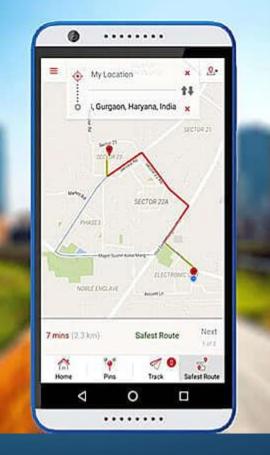

- Every 8 minutes a child goes missing in India.
- 97% of mobile users are never away from their device.
- Of the world's 4 billion mobile phones in use, 3.05 billion are SMS enabled.

TRACKY

Get notifications in unsafe locations and let friends track you

Choose safer route when you travel

Let other knows how safe you feel here.

TRACKY

- Sends message to listed contact along with your physical location.
- Users get an alert button when they enter the app in an area which has been marked potentially unsafe by any user.
- When the alert button is clicked the app sends the current GPS location to the nearest police station.

TRINETRA

- Whenever a child is found missing, image of the missing child along with the date is posted in the app so that the details will be sent to the police control room.
- This photo is then compared with the images captured recently by the security cameras.
- If any match is found, the location in which the image is captured is sent to that area police station.

FRAUD DETECTION

FRAUD DETECTION

- Suppose a person receives a fraudulent call asking for bank or credit card details and if the person gives the details.
- The OTP'S received from the bank are sent to the app and a voice message is read aloud in the local language set by the user asking for confirmation.
- Even if OTP is given to the fraud, then the transaction is detected as suspicious if IP address of the devices where recent transactions are done are not matched.

TECHNOLOGIES USED

- Tracky- Google Maps API, Firebase.
- Trinetra- Image processing, Face Recognition techniques.
- Fraud Detection- Classification Algorithms(Logistic Regression, K Nearest Neighbors (KNN), Random Forest Classifier).
